

"We have a reputation as one of the oldest and most well respected names for the supply of pressure treated timber fencing."

01

- Comprehensive range of creosoted and Celcure products.
- Large or small bespoke projects undertaken.
- Sustainably sourced high grade timber.
- Treated under pressure with Celcure or Creosote to European standards.
- Third party creosote and Celcure treatment undertaken.
- Nationwide delivery with specialised offload facilities.

FENCING

Calders & Grandidge are the expert brand for pressure treated timber fencing. We only use quality redwood timber to produce our fencing components for use in ground contact UC4; these products are all pressure treated in accordance with BS8417. Our UC4 fencing products are also pressure treated and the entire fencing range is accredited by WPA Benchmark product quality scheme.

We treat our fencing products with either Creosote for unrivaled long service life of over 40 years or Celcure which delivers either 15 or 30 year desired service life.

Pressure treating timber products with Creosote not only extends the service life expectancy beyond that of other preservatives, but is also particularly relevant to agricultural and equine applications as animals tend not to chew or 'cribb' creosoted timber.

We also offer the facility for some Celcure treated products to be stained black utilising Sleeper Oil, where customers prefer a darker initial finish and creosoted product is not appropriate.

As holders of the Royal Warrant for the supply of preserved timber fencing to Her Majesty The Queen, we take great pride in the products we produce. The fencing we supply Her Majesty can be found at The Royal Stud and Sandringham and all our fencing and gates are produced to these same high standards.
